SUMMARY

QA Engineer specializing in **end-to-end test automation** and **API validation**, with expertise in **Playwright**, **Selenium**, **Pytest**, and **Postman/Newman**. Experienced in designing **modular test frameworks**, executing full **SDLC/STLC** processes, and reporting defects in **Agile/Scrum** environments. Committed to shipping stable, well-tested software through both rigorous **manual testing** and **data-driven automation**.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C/C++, Java, SQL

Test Automation & Performance: Playwright, Selenium, Pytest, HTML Report Generation, JMeter

Manual Testing: Test Case Design, Bug Reporting, Regression, Smoke & Sanity Testing, RCA, Functional Testing

API Testing: Postman, Newman, REST API Validation, Schema Validation, Request/Response Integrity

Technologies: React.js, Node.js, Express.js, HTML, CSS, Tailwind, Bootstrap, MongoDB

Tools & Process: Jira, ClickUp, Git, GitHub, Agile (Scrum), SDLC, STLC

EXPERIENCE

Creative Soft Technology LTD.

Sep 2023 – Dec 2023

Software QA Intern

Dhaka, Bangladesh

- Designed and executed **50+ manual test cases** covering **smoke**, **sanity**, and **regression testing** for web platforms; identified and reported **10+ critical bugs** pre-release, preventing production defects and maintaining product stability.
- Tested and validated **30+ REST API endpoints** using **Postman**, verifying **authentication flows**, **data accuracy**, and **response reliability** to ensure seamless **backend-frontend integration**.
- Participated in **Sprint planning** sessions, documented defects in **Jira**, and supported efficient **defect resolution** within the **Agile** development team, adhering to full **SDLC** and **STLC** processes.

PROJECTS

OrangeHRM UI Automation | GitHub

Apr 2026 - May 2026

- Developed a scalable **UI automation framework** using **Playwright** and **TypeScript**, implementing the **Page Object Model (POM)** to reduce code duplication by 35% and improve script maintainability.
- Optimized **test execution time by 50%** by implementing a global **authentication strategy** that reuses login states, eliminating redundant login steps across multiple test suites.
- Integrated **faker-js** to generate dynamic, unique **test data** for complex form submissions, increasing test reliability and reducing data-related failures by 20%.
- Configured **parallel test execution** and automated **HTML reporting**, reducing total test duration from minutes to seconds across 100+ critical validation scenarios.

API Automation Framework | GitHub

Apr 2026 - Apr 2026

- Built a modular **REST API** test automation framework using **Python** and **Pytest**, covering full **CRUD operations**, **JWT authentication**, and dynamic filtering with a **97.7% test case pass rate**.
- Implemented a **layered architecture** separating API wrappers, test logic, and utilities — improving maintainability and scalability across the test suite.
- Integrated **Faker** library for dynamic **test data generation** and **Pytest fixtures** for session-based **JWT token management**, ensuring reliable and repeatable test execution.
- Automated **HTML report generation** using **pytest-html** with detailed request/response logs, enabling clear **failure diagnostics** and test execution visibility for stakeholders.

API Testing (Postman) | GitHub

Feb 2026 - Feb 2026

- Tested **23 RESTful API endpoints** for a student management system, validating functionality, **data integrity**, **business rule compliance**, and **error handling** across all scenarios.
- Automated **API test workflows** using **Postman scripts**, reducing manual test execution effort and enabling repeatable **regression runs**.
- Implemented **schema validation** for request and response payloads, detecting structural inconsistencies and enforcing **data consistency standards** early in the test cycle.
- Generated detailed **HTML reports** using **Newman CLI**, providing clear test result tracking and enabling stakeholder-ready **regression analysis** documentation.

EDUCATION

Daffodil International University

2020 - 2024

Bachelor of Science in Computer Science & Engineering (GPA: 3.58 / 4.00)

Dhaka, Bangladesh

- **Relevant Coursework:** Data Structures and Algorithms, Artificial Intelligence, Machine Learning, Database Management Systems, Operating System

TRAINING & COURSES

Codecamp by Astha.IT

January 2026 - Present

Software Quality Assurance (SQA) Bootcamp

Dhaka, Bangladesh

- **Covered Topics:** Manual Testing, API Testing, Automation Testing, Performance Testing, Real-World Projects

HONORS & AWARDS

- Achieved a 40% scholarship for 9 consecutive semesters in recognition of academic excellence at the university.

CERTIFICATIONS

- English Proficiency Test (Upper Intermediate: CEFR B2), Duolingo [2025]
